What’s Ahead For Airlines And Aviation In 2021
“Air travel demand could snap back quicker than many in the industry are predicting, but dark clouds are forming in China for aircraft makers. From what coronavirus vaccines mean for airlines to how new FAA rules could jump-start commercial drone activity, here’s what Forbes’ expert aviation contributors expect in the year ahead.”
Source: Forbes

What may lie ahead for aviation in 2021?
“None of us know how the fight against the most economically damaging phenomenon of most of our lifetimes will go. But we dare to believe that the coming year will be better than the one just gone. Here are our 2021 forecasts.”
Source: Flight Global

Forecasting the Global Supersonic Business Aviation Flight Movements Up to 2050
“Business aviation is typically the primary travel mode chosen by ultra-high-net-worth (UHNW) individuals and top executives. Business aviation passengers prefer the exclusivity associated with business jets, and are typically constrained by time and not cost when traveling...To better understand the potential size of the supersonic business aviation market and the extent of the future supersonic business flight network, this study utilizes a unique methodology that combines top-down and bottom-up approaches to forecast global supersonic business flight movements up to 2050.”
Source: Aerospace Research Central

Deep Losses Continue Into 2021
“This crisis is devastating and unrelenting. Airlines have cut costs by 45.8%, but revenues are down 60.9%. The result is that airlines will lose $66 for every passenger carried this year for a total net loss of $118.5 billion. This loss will be reduced sharply by $80 billion in 2021. But the prospect of losing $38.7 billion next year is nothing to celebrate. We need to get borders safely re-opened without quarantine so that people will fly again. And with airlines expected to bleed cash at least until the fourth quarter of 2021 there is no time to lose,” said Alexandre de Juniac, IATA’s Director General and CEO.”
Source: IATA
and brought together over 1,500 global aviation security experts and officials, Dr. Liu noted that the overarching goal with the Year of Security Culture initiative will be to raise security awareness in aviation operations and have the entire sector thinking and acting in a security-conscious manner.”
Source: ICAO

21 Things To Expect From Commercial Aviation In 2021
“2020 has been a year that the airline industry will want to forget. Nonetheless, many lessons would have been learned and these will be taken into the new year. Let’s take a look at what we can look forward to in 2021 now that it has finally come.”
Source: Simply Flying

Airlines Bet On Traffic Comeback In Second Half Of 2021
“First a disclaimer: Shortly after the global outbreak of the novel coronavirus pandemic starting in March 2020, airlines began to suspend their financial guidance. They found it impossible to predict their performance over the ensuing months, let alone longer term. The International Air Transport Association (IATA) also had to revise its forecasts downward several times throughout the year as the crisis became deeper and longer than it had anticipated.”
Source: Aviation Week

IATA: Some Airlines Won’t Survive To See Aviation’s Recovery
“The International Air Transport Association (IATA) today presented its revised outlook for the airline industry. As expected, it’s a pretty bleak synopsis, with a net loss of $118 billion forecast for 2020. However, the association believes that things could look up in 2021, with a ‘vaccine bump’ expected during the fourth quarter, although it warns that some airlines may not survive to see this recovery.”

12 wild things that happened in aviation in 2020
“This was a heinous year for the aviation industry. Absolutely horrendous, in fact. But among the gloom there were some lighter, crazier, even hopeful

China was the first aviation market in the world hit hard by COVID-19 and has been recovering gradually as the pandemic became largely under control within mainland China. This study reviews the recovery pattern influenced by the Chinese government’s aviation policy choices, in the hope that our discussions and findings will help improve aviation policy responses elsewhere.”
Source: Elsevier

Pandemics and environmental shocks: What aviation managers should learn from COVID-19 for long-term planning
“This article gives guidance to aviation managers being struck by environmental shocks. The introduced frameworks support aviation managers to think strategically during times of shocks and help them to prepare for future shocks by developing more resilient and learning organizations. Practical, short-term recommendations include strategically orienting or reorienting and not exaggerating the current, short-term developments due to unproductive uncertainty.”
Source: Elsevier

Creating Formal Characterizations of Routine Contingency Management in Commercial Aviation
“In this work, safety-producing behaviors are identified and abstracted into resilient performance strategies. Production rules that encapsulate these strategies are then generated and classified in the Soar cognitive architecture. The strategies are then applied to a remotely-operated air cargo example to demonstrate how safe learning is facilitated. The learned rules and strategies are then formally verified.”

Reliability in the era of electrification in aviation: A systems approach

CAPA outlook - international air travel to struggle to get off the ground in 2021
“CAPA Founder and Chairman Emeritus, Peter Harbison, has issued a blunt warning to the global aviation and travel industry at the outset of 2021 – that vaccines are “not the solution” to the problems the industry faces…”There seems to be a failure to diagnose what the problem is, rather than rushing straight to the solution for airlines and particularly international airlines. So, diagnosing the challenge is essential to solving it, for without diagnosis there can be no cure”, he said.”

AVIATION APPLICATIONS

- **Graphene oxide thin film structural dielectric capacitors for aviation static electricity harvesting and storage**
  “In this paper, we demonstrate the feasibility of using carbon fibre reinforced polymer (CFRP) laminates for the dual functions on aircraft as high load-bearing structural materials, as well as for the harvesting and storage of static electricity during flight which can be used to power navigation lights and other electrical systems. CFRP laminate was fabricated into a structural dielectric capacitor (SDC) composite by sandwiching graphene oxide (GO) film between two electrically-conductive carbon fabric layers.”
  Source: Elsevier

- **Analysis and Maximizing RF Harvesting System based on Antenna Shapes for Aviation Applications**
  “This paper presents designing and analysis of microstrip patch antenna at 900 MHz frequency for aviation applications. Comparative analysis is presented on the basis of geometry of patch of antenna, rectangular, circular and triangular. Patch is used to compare the results. Inset feed is used due to which proposed antenna achieves size reduction. Antennas are designed on FR4 material with dielectric constant 4.2 and thickness 1.6 mm. The different performance parameters such as return loss, gain and bandwidth of these antennas are compared.”
  Source: IEEE Xplore

AVIATION FUEL

- **Safe, cost-efficient contingency operations for airports**
  “As air traffic volumes continue to rise, many airports are seeing the need to increase capacity safely and cost-effectively. They must typically also invest in modernisation in order to tackle new challenges such as growing volumes of unmanned aerial vehicle (UAV) traffic. Given these demands on already tight budgets, maintaining effective contingency arrangements can seem like a costly distraction—not least because the conventional approach to contingency is a huge investment in an additional tower, which then cannot handle the full capacity of the main tower or airport operations centre.”

**Government to provide additional S$84 million to aviation sector amid COVID-19 pandemic**

“SINGAPORE: The Government will provide an additional S$84 million to the aviation sector to cushion the blow of the COVID-19 pandemic on workers and businesses, the Civil Aviation Authority of Singapore (CAAS) said on Tuesday (Dec 29).”
Source: Channel News Asia

**Brexit and aviation: all’s well that ends. Well, almost...**

“Brexit was never about improving the European aviation system, but there were major concerns that the existing conditions would be seriously eroded. These have mostly been avoided, even if the outcome is less than optimal.”
Source: CAPA Centre for Aviation

**Airlines predicted to spend US$2.8 trillion on new aircraft after COVID-19**

“The 2020 Cirium Fleet Forecast predicts that 43,315 new passenger and freighter aircraft will be delivered between 2020 and 2039. This represents an 8 percent drop compared to the 20 year outlook in the 2019 Cirium Fleet Forecast and includes some 4600 fewer deliveries in the next decade.”
Source: Newshub

**Energy Transition in Aviation: The Role of Cryogenic Fuels**

“Aviation is the backbone of our modern society. In 2019, around 4.5 billion passengers travelled through the air. However, at the same time, aviation was also responsible for around 5% of anthropogenic causes of global warming. The impact of the COVID-19 pandemic on the aviation sector in the short term is clearly very high, but the long-term effects are still unknown... This paper explores some of the various options for energy carriers in aviation and particularly highlights the possibilities and challenges of using cryogenic fuels/energy carriers such as liquid hydrogen (LH2) and liquefied natural gas (LNG).”

**Can Airline Stocks Bounce Back in 2021?**

“For now, passengers continue to stay away. Industry revenue is projected to fall more than 65% year over year, and the airlines are missing out on a lot of revenue during the usually high-margin holiday travel season.”
Source: Frost & Sullivan

**Prospects and perspectives foster enhanced research on bio-aviation fuels**

“Bio-fuels can indeed mitigate the environmental impact of the aviation sector mostly due to their low carbon intensity and favourable chemical structure. Such bio-aviation fuels must have “drop-in” characteristics with specifications and compatibility with the combustion behaviour of kerosene... In order to reduce the cost of bio-aviation fuel, several research directions are encouraged and discussed in the paper.”
Source: Elsevier

**Modelling, simulation and intensification of the hydroprocessing of chicken fat to produce renewable aviation fuel**

“The conversion process for this raw material has not been economically evaluated, and neither it has been intensified. Therefore, in this work the modelling, simulation and intensification of the hydroprocessing of chicken fat to produce renewable aviation fuel is proposed. For this, conventional hydrotreating processes are modelled and used to define the intensified ones, where complex configurations are used to perform the purification. All processes are compared in terms of economic and environmental indicators.”
Source: Elsevier

“Air transport represents a small share of GDP but is closely linked to the activities of other sectors, especially airports and aircraft manufacturing – collectively considered here as the “aviation industry”... While the aviation industry has often been a target of government policies, the COVID-19 crisis has precipitated a new suite of loans, loan guarantees, wage subsidies and equity injections, raising concerns about competition and the efficient use of public resources.”
Source: OECD

**Economic Impacts of COVID-19 on Civil Aviation**

“In light of the rapidly spreading disease named as COVID-19, the International Civil Aviation Organization (ICAO) actively monitors its economic impacts on civil aviation and regularly publishes updated reports and adjusted forecasts. The latest version can be viewed here and all full reports are available further below.”
Source: ICAO

**Geopolitical Chaos Disrupts the Global Aircraft Market, 2019–2030**

“The global aircraft market saw a year of turmoil in 2019 as the Boeing 737 MAX saga disrupted production from the commercial aircraft perspective. 2020 has dwarfed the woes of the previous year as the COVID-19 pandemic has thonged through every facet of the sector, showing mercy to few. Most evaluations see the industry as a whole recovering in the years to come.”

**Mandatory Covid-19 Vaccines for Travel Would ‘Kill the Sector’**
“The rollout of vaccines against Covid-19 has intensified debate about whether they should be made mandatory, with the head of a major tourism lobby saying that doing so would cause irreversible harm to the struggling sector.”
Source: Bloomberg

**Airports reject vaccine requirement as travel debate intensifies**
“Airports Council International, which represents airports worldwide, joined most airlines in calling for a choice between testing or vaccination, fearing a blanket rule imposing pre-flight inoculation would be as disruptive as quarantines.”
Source: The Star

**More parcels, fewer people: how aviation is adapting to COVID-19**
“Airline firms are rushing to convert passenger jets into freighters, as the value of used planes tumbles amid the pandemic. It’s expected the number of passenger-to-freight conversions globally will rise by 36% in 2021.”
Source: World Economic Forum

**PRIVATE AVIATION**

**Can’t make Courchevel this year? How about a private jet to the Caribbean?**
“Those who usually hop a commercial flight to spend Christmas in the Alps might be swapping their skis for a snorkelling kit this year — and choosing to fly privately to more balmy climes.”
Source: Financial News London

**2021 Private Jet Predictions**
“Yes, it is that time of the year. Just weeks away separate us from 2021 and, as every year, Kyle Patel, CEO of Palm Beach-based private jet provider BitLux, shares his projections for next year’s business aviation industry. The 2020 trend for this segment was adapting and remaining flexible to the challenges imposed by the pandemic, with the possible implications that such an environmental policy can have on the Indian aviation sector by modelling the impact of a prospective carbon tax on the domestic aviation sector.”
Source: IIMB Management Review

**AIRCRAFT LANDING PERFORMANCE**

**Towards online prediction of safety-critical landing metrics in aviation using supervised machine learning**
“In this work, a novel offline-online framework is developed for building a global predictive model offline to predict landing performance metrics online. The framework leverages flight data from the approach phase between certain approach altitudes (also called gates) in order to train the offline model to predict the landing true airspeed and ground speed using a Random Forest regression algorithm.”
Source: ELSEVIER

**OPTO-CHEMICAL SENSOR TECHNOLOGIES**

**Health Monitoring of Aviation Hydraulic Fluids Using Opto-Chemical Sensor Technologies**
“Passenger safety requires that in commercial airplanes hydraulic actuators be powered by fire-resistant hydraulic fluids. As a downside, such fluids are hygroscopic which means that these tend to accumulate humidity from the environment and that the dissolved humidity tends to produce acidity which can corrode all kinds of metallic components inside a hydraulic system. As such damage in safety-critical subsystems is hard to localize and expensive to repair, sensor technologies are required which allow the state of water contamination and fluid degradation to be routinely checked and necessary maintenance actions to be scheduled in a way that causes minimum flight interruptions. The paper reviews progress that has been made in developing such sensor systems and in commissioning these into practical flight operation.”

The global scale, distribution and growth of aviation: Implications for climate change

“Prior to the COVID-19 crisis, global air transport demand was expected to triple between 2020 and 2050...Data also supports that a minor share of air travelers is responsible for a large share of warming... Individual users of private aircraft can contribute to emissions of up to 7,500 t CO2 per year. Findings are specifically relevant with regard to the insight that a large share of global aviation emissions is not covered by policy agreements.”

Source: Elsevier

Use of aviation by climate change researchers: Structural influences, personal attitudes, and information provision

“For climate change researchers, work-related travel – including for conferences and fieldwork – is a major carbon-emitting activity. At the same time, many argue that climate scientists have an important role in curbing their own aviation emissions to align their practices with their assertions in relation to emissions reduction. We examine the tensions
“The three-year project – being put out to tender by the European Union Aviation Safety Agency – will also gather evidence of their effects on cabin air quality, and develop an understanding of different contamination scenarios which might be observed during flight.”

Aviation deaths rise worldwide in 2020 even as fatal incidents, flights fall
“Aviation consulting firm To70 said in 2020 there were 40 accidents involving large commercial passenger planes, five of which were fatal, resulting in 299 fatalities. In 2019 there were 86 accidents, eight of which were fatal, resulting in 257 fatalities.”

From aviation to aviation: Environmental and financial viability of closed-loop recycling of carbon fibre composite
“In this study, aircraft interior applications of recycled carbon fibre (rCF) replacing virgin glass fibre are examined over the full life cycle in terms of environmental and financial viability. The viability of rCF for closed-loop aviation applications are demonstrated across rCF conversion (papermaking; fibre alignment) and composite manufacture (compression moulding; injection moulding).”

Risk Assessment Regarding Perceived Toxicity and Acceptance of Carbon Dioxide-Based Fuel by Laypeople for Its Use in Road Traffic and Aviation
“One approach to mitigate the emissions of carbon dioxide (CO2) is the development of CO2-based products, such as fuels for road traffic and aviation… For both aviation and road traffic the acceptance of CO2-based fuels increased with decreasing fear of health and environmental consequences and the less frequently health effects were assessed. The findings allow to derive implications for risk assessment and communication strategies in the development and roll-out of CO2-based fuels.”

Cleaner production of flame-retardant-glass reinforced epoxy resin composite for aviation and reducing smoke toxicity
“The flame-retardant glass fiber reinforced epoxy composites have been examined for the aviation and defense industry recently…This study demonstrated the holistic cleaner production approach that did not ignore the environment and human health effects of fire risk and hazards on, and could be apply for the all polymer composite requiring thermal resistance, first time in the literature.”

Sensitivity Analysis of Aviation Environmental Impacts for the Base of Aircraft Data (BADA) Family 4

“In this paper we present the first stage of the uncertainty quantification effort on BADA4. First, the uncertainty characterization step identifies and mathematically representing the uncertain parameters, including BADA4 model coefficients and physical/operational parameters. Subsequently, a sensitivity analysis quantifies the impacts of physical/operational uncertainties on key AEDT outputs. Through the result analysis, it is found out that the physical and operational uncertainties have significant impact on the estimation of key environmental metrics.”

Women in Aviation: A Phenomenological Study Exploring the Needs and Wants Necessary for Graduation

“The World Robotics report shows that Europe is the region with the highest robot density globally, with an average value of 114 units per 10,000 employees in the manufacturing industry. For more facts about robots watch IFR’s video news about Europe in one minute.”

Lightweight blockchain assisted secure routing of swarm UAS networking

“In this paper, we propose a lightweight Blockchain-based secure routing algorithm for swarm UAS networking. We leverage the lightweight Blockchain to enhance the security of routing of swarm UAS networking which is based on 5G NR cellular networking. Different from the conventional routing algorithms, the proposed algorithm with lightweight Blockchain can avoid the malicious connections from attackers, recognize the malicious UASs and mitigate the attacks from malicious UASs.”
Beamforming-Constrained Swarm UAS Networking Routing

"With the evolution of 5G cellular communication, beamforming is mature for the implementation on a large scale... In this paper, regarding the constrained steering space, we proposed a novel algorithm, Optimized Ad-hoc On-demand Distance Vector (OAODV), which aims to improve the capacity of beamforming on swarm UAS networking. With the adjustable searching space, OAODV can achieve better latency, overhead, and link generation than the conventional algorithms of Ad-hoc On-demand Distance Vector (AODV) and Optimized Link State Routing (OLSR). Compared with AODV and OLSR, OAODV can reduce 35.07% and 68.93% of average overhead, and decrease 47.73% and 11.55% of average latency respectively."
