3D BIOPRINTING

Tel Aviv University Scientists Print First 3D Heart Using Patient's Biological Materials

"This heart is made from human cells and patient-specific biological materials. In our process these materials serve as the bioinks, substances made of sugars and proteins that can be used for 3D printing of complex tissue models."

ADDITIVE MANUFACTURING

Green Fab Lab Applications of Large-Area Waste Polymer-Based Additive Manufacturing

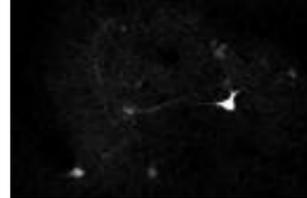

"In this study the Gigabot X, an open source industrial 3D printer, which has been shown to be amenable to a wide array of recyclables for FFF/FGF 3D printing, is used to evaluate this economic potential ..."

ARTIFICIAL INTELLIGENCE

Artificial Intelligence Singles Out Neurons Faster Than a Human Can

"Biomedical engineers have developed an automated process that can track and map active neurons as accurately as a human can, but in a fraction of the time."

BLOCKCHAIN

Cube Chain Launches Test-Net of Revolutionary Blockchain Ecommerce Platform

"Cube Chain creates 24 data and special blocks and places them into a 'cube'. The special blocks are made up of a data index block, data statistics processing block, and an escrow function block."

CLOUD SECURITY

Asia-Pacific Cloud Workload Security Industry Guide

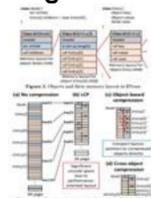

"As cloud workloads are increasing in number and getting more complex, businesses need to have visibility into the cloud environment and fully understand what, where, and how to protect these workloads."

COMPUTER SCIENCE

A Novel Data-Compression Technique for Faster Computer Programs

"... Researchers free up more bandwidth by compressing 'objects' within the memory hierarchy."

Source: [EurekAlert!](#) (April 2019)

DATA SCIENCE

Working Scientist Podcast: Learn to Code to Boost Your Research Career

Getty Images

"Jessica Hedge tells Julie Gould how she learned to code as PhD student, and the freedom and flexibility it provides to manage large datasets ..."

DEVICES

Best in Snow: New Scientific Device Creates Electricity from Snowfall

"Snow is positively charged and gives up electrons. Silicone combined with carbon, hydrogen and other elements - is negatively charged. When falling snow contacts the surface of silicone, that produces a charge that the device captures, creating electricity."

GENE-EDITING

CRISPR-Cas3 Innovation Holds Promise for Disease Cures, Advancing Science

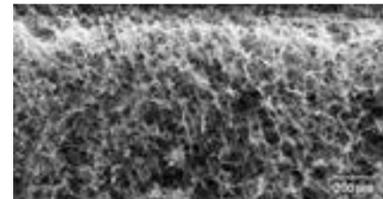

"A Cornell researcher developed a new type of gene editing CRISPR system that can efficiently erase long stretches of DNA from a targeted site in the human genome."

GRAPHENE

A New Graphene Foam Stays Squishy at the Coldest Temperatures

"A new graphene-based foam is the first material to remain soft and squishy even at deep cryogenic temperatures. Most materials become stiff and brittle in extreme cold. The foam stays super elastic even when subjected to the temperature of liquid helium."

INDUSTRY 4.0

Digital Innovation: Creating the Utility of the Future

"As disruptive forces transform the power and utilities sector, many companies are turning to digital technologies and a more innovative mindset to thrive in the new era. Those that don't seize the opportunity to evolve risk being left behind or displaced by more agile players."

INTERNET OF THINGS

All Things Can Be Part of the Internet of Things with New RFID System

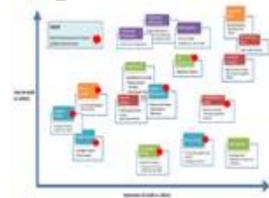

"The system, called IDAct, bridges the gap between the estimated 14.2 billion 'smart' electronic devices that are currently part of the Internet of Things and the hundreds of billions of everyday non-smart objects left out of the picture."

MEDICAL SERVICE DESIGN

Designing a Program Evaluation for a Medica-Dental Service for Adults with Autism and Intellectual Disabilities Using the RE-AIM Framework

"... evaluations that benchmark and sustain models serving adults with developmental disabilities are lacking, impeding pilot programs from becoming official care pathways ..."

NANOTECHNOLOGY

Water That Never Freezes

"Can water reach minus 263 degrees Celsius without turning into ice? Yes it can, say researchers from ETH Zurich and the University of Zurich, if it is confined in nanometre-scale lipid channels."

ROBOTICS

This Bot Might Be the Way to Save Recycling

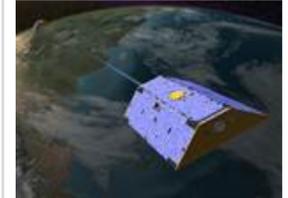

"The robot aims to reduce the reliance on human sorters and thus improve the viability of recycling operations. This is achieved through a novel approach of using special actuators that sort by material stiffness and conductivity."

WATER RESOURCES MANAGEMENT

Improving Water Resources Management with Satellite Data

"An extensive review reveals that remote sensing is changing the way we manage water resources and suggests that the coming years will bring both exciting advancements and new challenges."
