

**Fluorescence activated cell sorting via a focused traveling surface acoustic beam**  
*Lab on a Chip*

SUTD Authors: Zhichao Ma, Yining Zhou, Collins, David J. Collins and Ye Ai

"We have developed a benchtop scale fluorescence activated cell sorting (FACS) system that makes use of a highly focused traveling surface acoustic beam ( $\sim 50 \mu\text{m}$ ) for highly accurate single cell level sorting with excellent biocompatibility. The ability to precisely manipulate single biological cells offers unprecedented capabilities of single-cell mutation analysis, which is an enabling technology towards precision medicine."

---Ai Ye

**Silicon rich nitride ring resonators for rare - earth doped telecommunications-band amplifiers pumped at the O-band**

*Scientific Reports*

SUTD Authors: Peng Xing, George Chen, Zhao Xinyu, Tan Mei Chee and Dawn Tan

"Light amplification is fundamental to the processing optical signals. Most network amplifiers today rely on optical pumps located far from the signal, precluding resonant enhancements. We demonstrate resonators that are effectively dual-resonant, which together with a new Dy-Er material platform, enables efficient amplification within the telecommunications band."

---Dawn Tan and Tan Mei Chee

**Sustainable Green Networking And Computing In 5g Systems**

*IEEE Wireless Communications*

SUTD Author: Lingjie Duan

"This Feature Topic is dedicated to presenting recent technical advances on the energy efficiency and sustainability in 5G communication and networking systems from the perspective of technology, economics, and deployment."
